MEDIA ADVISORY

Demonstration of new Hawaii company's biotechnology solution for restaurant grease waste at the GOING GREEN GET-TOGETHER

WHAT: Demonstration of new Hawaii company's biotechnology solution to dispose of restaurant grease waste by bioremediation. Hydrologix Grease Reduction Systems, Inc will show that the FOG (fats, oils, grease) waste liquid in restaurant grease interceptors is being turned into water, (gray water) on the spot.

Deputy Chief of Staff, Jonah Kaauwai, representing Lt. Gov Duke Aiona, and Deputy Director, Ross Tanimoto from Mayor Hanneman's staff will be attending.

Lucy's Grill & Bar is one of the first Hawaii businesses to go greener by signing up for this valuable service, thus saving pumping and hauling costs while getting a sophisticated telemetry system to monitor and prevent costly and foul grease interceptor overflows. Restaurant grease interceptors and grease traps are city-mandated receptacles to contain the food waste liquids from kitchen drains, in particular FOG (fats, oils, grease). This is an environmentally responsible solution, virtually eliminating the need for pumping, hauling and dumping the grease waste somewhere else, which is only moving the problem.

WHEN: Thursday, November 13, 2008 at 10am – noon

WHERE: Lucy's Grill & Bar, 33 Aulike Street, Kailua, Oahu, 96734

Hydrologix Grease Reduction Systems, Inc., based in Waikoloa, Hawaii, together with its Californian division, provides the Hydrologix® GRS service in the USA. After six years of development and with five patents filed, their Hydrologix® GRS is available commercially as a F.O.G. wastewater treatment solution for the Food and Hospitality Industry. The company has a proven track record of more than 20 years in the design, engineering and deployment of innovative solutions in soil decontamination, water and wastewater processing. Visit their Web site at www.bioremediation.net and www.greasereduction.com. The Hydrologix logo and name are registered trademarks of Hydrologix® Systems LLC.
